

## The European Community RoHS and WEEE Directives

### What are the RoHS and WEEE Directives?

The **RoHS** (*Restriction of Hazardous Substances*) and **WEEE** (*Disposal of Waste Electrical and Electronic Equipment*) Directives from the European Community are an attempt to reduce pollution and the waste of world resources. These Directives regulate the way electrical and electronic goods are designed, manufactured and disposed of at the end of their useful life.

The RoHS Directive 2015/863/EU bans any new electrical or electronic equipment containing more than agreed levels of a number of prescribed substances being placed on the EU market. The original version (2002/95/EC) contained an exemption in regards to the use of polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE) as flame protection coating for plastics (e. g. cable insulation). This exemption was revoked in 2018 and limit is now 0.1% for each substance.

The WEEE Directive, WEEE/2002/96/EC, deals with the disposal of waste electrical and electronic equipment at the end of its useful life.

### Dycon Power Solutions Ltd.'s compliance with RoHS and WEEE

Dycon Power Solutions Ltd is committed to the protection of our environment and continuously makes every effort to meet both RoHS Directive 2015/863/EU and WEEE Directive 2002/95/EC. We are fully committed to complying with the current, and any future, RoHS and WEEE directives and fully support our customers in their compliance.

Dycon Power Solutions Ltd hereby certifies that all the components used in our products are RoHS compliant to the latest Directive and that our WEEE-registered producer number is **WEE/CH0052TQ**
